

# EASYNOTES

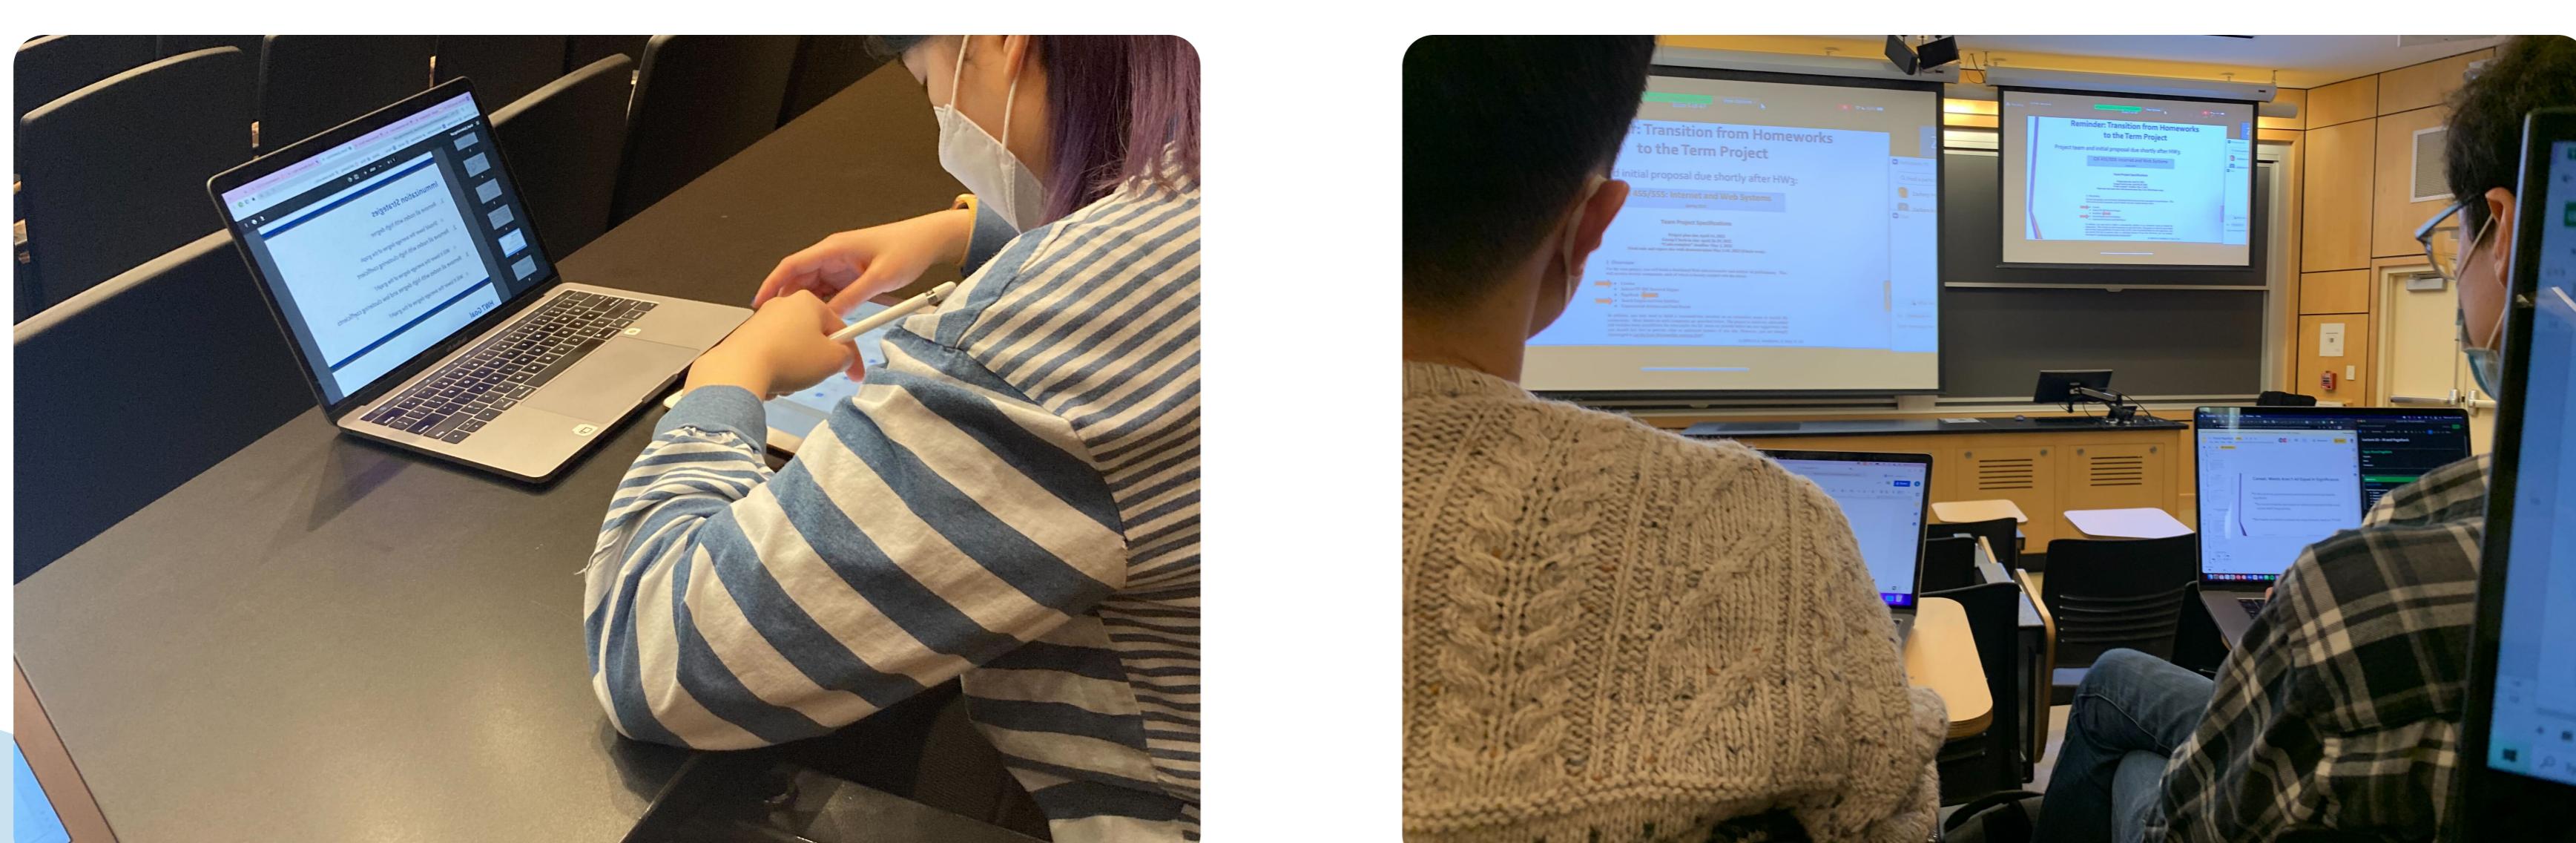

## Notetaking tool for CS students

**Easynotes** is a web-based note-taking tool designed to help CS students organize their class notes and ultimately improve their learning experience by having "all notes in one place"!

## Problem\

We talked to five or more CS students to observe and understand their current challenges in note-taking. Interviewees agreed that each class expects students to quickly capture and store notes, slides, and code files, which is often too overwhelming.

## key insights:

"There is no way to take notes on coding stuff. I end up looking it up online again and again."

"Every note is everywhere, so there are so many places to cross-check."

"I wish there was a consolidated process for all classes. Sometimes it's just easier to Google than review my notes."

## Final Outcome\

- minimal and intuitive interface design
- quickly switch to different ways of notetaking
- execute code

Notes organization and highlighted blocks

Create code editor blocks for live coding class

Create handwriting block for graph drawing

Image insertion for reference
